Peripheral Artery Disease and Work-Related Outcomes

THE ASSOCIATION OF PERIPHERAL ARTERY DISEASE WITH WORK-RELATED OUTCOMES

For those in the workforce, being able to attend work, perform well on the job and stay at work or return to work in a timely and healthy fashion should a period of work disability occur is critical for the continued physical and socioeconomic health of the individual and their contributions to corporate success.

Report by Dr. Kimberly Jinnett

Check-out our latest report, "The Association of Peripheral Artery Disease (PAD) with Work-related Outcomes". This report presents the results of a study comparing the impact of moderate to severe PAD with mild PAD along with other comorbidities on the incidence and duration of short-term work disability. By adopting a patient-centered approach to prevention, treatment access and improved outcomes we should expect greater focus on functional and quality of life outcomes that matter to individuals.

Workforce Health and Performance — Bright Ideas Survey

Take the survey here: <https://www.surveymonkey.com/r/TWLW87T>

The Center for Workforce Health and Performance wants your Bright Ideas. We will feature these ideas, select guest bloggers, delve deeply on topics and inform research and practice by spreading these Bright Ideas.

For our first Bright Ideas survey we would like to know your thoughts on the best ways to support workforce health and performance.

Our challenge — can you do it in 20 words or less?

The Center for Workforce Health and Performance (CWHP) is a clearinghouse for information that may be used to support evidence-based policies and practices for a healthier, happier and high-performing workforce, a healthier economy and, in turn, healthier and more productive communities. CWHP develops knowledge around workforce health and performance improvement and disseminates it widely through scientific and educational forums.
